Behavior Solutions for the Home is a tool for parents who have children whose behaviors are impeding their daily life. Once they see a particular behavior, they can quickly look up an in-the-moment solution! Now more than ever, states are mandating that children with special needs be included in the general education classroom. As a result, all educational professionals, from teachers to administrators, need specific training on how to handle unusual behaviors. This book builds on the success of the first one by expanding the focus from within the classroom to all areas of the school environment—in the hallways, cafeteria, and auditorium, on the playground, and in therapy sessions during the school day. See a particular behavior? Look it up! 

Director of special education Peter Gennaro, occupational therapist Beth Aune, and special needs mom and advocate Beth Burt collectively address and solve problematic behaviors relating to Asperger's Syndrome, or ADHD. Others may not, leaving teachers unsure how to teach them. This book is a tool for teachers who have a student or students in their classroom whose behaviors are impeding their learning. If they see a particular behavior, they can quickly look up an in-the-moment solution, and then read more about what could be causing that behavior. A must-have for every inclusive classroom!

Each year there is a growing emphasis on the inclusion of students with special needs into the general education population. Some students may come with a diagnosis: Learning Disability, Autism, or mental health challenges, while others may not have the support they need in the classroom. This book provides a comprehensive, reader-friendly guide to creating a three-tiered system of support for your school. Students with special needs are critical for our educational system, so we must provide all students with the support and assistance they need to reach their full potential.
Clarity, focus, and action are essential traits for parents of children with autism. A Behavior Solutions for Parents guidebook offers practical tips and strategies to help parents navigate the challenges of raising a child with autism at home and in the community. Every parent should have a copy of this must-have resource!

Lynn Hoover, a renowned dog behaviorist, shares her vast knowledge on dog-human relationships in this book. Her insights into the behavior of dogs will resonate with anyone who has ever loved a dog. Hoover's approach is both enlightening and entertaining, making this book a valuable addition to any dog enthusiast's library.

In *Behavior Solutions: Teaching Academic and Social Skills Through RTI at Work*, authors John Hannigan, Jessica Djabravan Hannigan, Mike Mattos, and Austin Buffum address the role of student behaviors and emotional states in schools and describe the need for a system of behavioral supports. They advocate for the implementation of the PLC framework and RTI process to create a system of behavioral supports in multiple tiers (prevention, intervention, and remediation). Success in this effort requires schoolwide structures that are collaborative, research-based, and practical. This book provides the guidance necessary to integrate and apply essential behavior standards, processes, tools, and resources that allow schools to function as PLCs providing behavioral support at all three tiers through a thorough implementation of the RTI process.

Written by a veteran police officer turned college professor, this book on American policing covers critical issues such as police use of deadly force, bias toward minorities, and police psychology. The book takes a multidisciplinary approach, covering police psychology, behavior, policy, and law. It addresses the proliferation of violence in minority communities and examines the response of minority communities to police brutality. The book also illustrates signs that a police agency is faltering, how a community becomes disenfranchised from police, and quality assurance measures to reduce or remove the problems.

In *Organizational Behavior: Solutions for Management*, Paul Sweeney and Dean McFarlin identify four key management skills areas that act as building blocks for successful behavior in management: self-insight/perceptual skills; ability to inspire/motivate/lead; ability to analyze situations; and personal flexibility/adaptability. The authors also emphasize the importance of the problem-solving process in management, which enables managers to use this process to deal with the “people problems” they face more effectively. Studying organizational behavior can help individuals understand their strengths and weaknesses.
