The Roman Emperor decided a city was needed in a certain place. This book shows how it was built, illustration by illustration, with explanations of what is happening. From the laying out of the streets, the assembly of aqueducts for water, the cloaca/sewers, the baths and the buildings/apartments where the people lived, all is carefully laid out and carefully pictured.

City: A Story of Roman Planning and Construction: Macaulay ...

In City, David Macaulay introduces readers to the fascinating world of Ancient Roman architecture and engineering, combining straightforward text and black and white illustrations to tell the story of a city's creation. While the Roman city of Verbonia is imaginary, its planning and construction are based on those of the hundreds of Roman cities founded between 300 B.C. and 150 A.D.

City: A Story of Roman Planning and Construction - Kindle ...

"City charts the planning and building of an imaginary Roman city, 'Verbonia.' Macaulay focuses on the achievement of efficient and rational city planning. His brilliantly individualistic drawings capture the essential quality of the Roman character, the ability to organize." School Library Journal, Starred. From the Publisher

During the late Republic and all the Roman Empire, Taranto was a simple provincial city (Prefecture of Italy, Diocese of Italia suburbicaria, Apulia et Calabria province). Emperor Trajanus tried to counter the reduction of the population giving the Tarentine lands to his veterans, but this initiative failed.

Text and black and white illustrations show how the Romans planned and constructed their cities for the people who lived within them.

Superb design, magnificent illustrations, and clearly presented information distinguish all of David Macaulay's books. Whether chronicling the monumental achievements of past civilizations or satirizing modern architecture, he is concerned above all in how constructions are made and what their effects are on people and their lives.

Text and black and white illustrations show how the Romans planned and constructed their cities for the people who lived within them.

A synthesis of recent work in archaeology and social history, drawing on physical, literary, and documentary sources.

One marker of the majesty of ancient Rome is its surviving architectural legacy, the stunning remains of which are scattered throughout the circum-Mediterranean landscape. Surprisingly, one truly remarkable aspect of this heritage remains relatively unknown. There exists beneath the waters of the Mediterranean the physical remnants of a vast maritime infrastructure that sustained and connected the western world's first global empire and economy. The key to this incredible accomplishment and to the survival of structures in the hostile environment of the sea for two thousand years was maritime concrete, a building material invented and then employed by Roman builders on a grand scale to construct harbor installations anywhere they were needed, rather than only in locations with advantageous geography or topography. This book explains how the Romans built so successfully in the sea with their new invention. The story is a stimulating mix of archaeological, geological, historical and chemical research, with relevance to both ancient and modern technology. It also breaks new ground in bridging the gap between science and the humanities by integrating analytical materials science, history, and archaeology, along with underwater exploration. The book will be of interest to anyone interested in Roman architecture and engineering, and it will hold special interest for geologists and mineralogists studying the material characteristics of pyroclastic volcanic rocks and their alteration in seawater brines. The demonstrable durability and longevity of Roman maritime concrete structures may be of special interest to engineers working on cementing materials appropriate for the long-term storage of hazardous substances such as radioactive waste. A pioneering methodology was used to bore into maritime structures both on land and in the sea to collect concrete cores for testing in the research laboratories of the CIG Italcementi Group, a leading cement producer in Italy, the University of Berkeley, and elsewhere. The resulting mechanical, chemical and physical analysis of 36 concrete samples taken from 11 sites in Italy and the eastern Mediterranean have helped fill many gaps in our knowledge of how the Romans built in the sea. To gain even more knowledge of the ancient maritime technology, the directors of the Roman Maritime Concrete Study (ROMACONS) engaged in an ambitious and unique experimental archaeological project B the construction underwater of a reproduction of a Roman concrete pier or pila. The same raw materials and tools available to the ancient builders were employed to produce a reproduction concrete structure that appears to be remarkably similar to the ancient one studied during ROMACONS fieldwork between 2002-2009. This volume reveals a remarkable and unique archaeological project that highlights the synergy that now exists between the humanities and science in our continuing efforts to understand the past. It will quickly become a standard research tool for all interested in Roman building both in the sea and on land, and in the history and chemistry of marine concrete. The authors also hope that the data and observations it presents will stimulate further research by scholars and students into related topics, since we have so much more to learn in the years ahead.

A beautifully designed guidebook to the unnoticed yet essential elements of our cities, from the creators of the wildly popular 99% Invisible podcast

A comprehensive history of Roman Bath

A Companion to the City of Rome presents a series of original essays from top experts that offer an authoritative and up-to-date overview of current research on the development of the city of Rome from its origins until circa AD 600. Offers a unique interdisciplinary, closely focused thematic approach and wide chronological scope making it an indispensable reference work on ancient Rome Includes several new developments on areas of research that are available in English for the first time Newly commissioned essays written by experts in a variety of related fields Original and up-to-date readings pertaining to the city of Rome on a wide variety of topics including Rome's urban landscape, population, economy, civic life, and key events

City of Saints explores how Byzantine Rome naturalized saints from throughout the Mediterranean world to build a new sacred topography. As a result, an exhausted city with a limited Christian presence metamorphosed into the spiritual center of Western Christianity.

With over 750 illustrations, Roman Buildings is a thorough and systematic examination of Roman architecture and building practice, looking at large-scale public buildings as well as more modest homes and shops. Placing emphasis on the technical aspects of the subject, the author follows the process of building through each stage -- from quarry to standing wall, from tree to roof timbers -- and describes how these materials were obtained or manufactured. The author also discusses interior decoration and looks at the practical aspects of water supply, heating and roads.
