Seeing is Understanding. The first VISUAL guide to marine diesel systems on recreational boats. Step-by-step instructions in clear, simple drawings explain how to maintain, winterize and recommission all parts of the system - fuel deck fill - engine - batteries - transmission - stern gland - propeller. Book one of a new series. Canadian author is a sailor and marine mechanic cruising aboard his 36-foot steel-hulled Chevrier sloop. Illustrations: 300+ drawings Pages: 222 pages Published: 2017 Format: softcover Category: Inboards, Gas & Diesel

Assessment and Treatment of Non-Suicidal Self-Injury: A Clinical Perspective is the ideal primer for anyone who works with people who self-injure. Profiling who is affected as well as what their behaviour includes, the book explores the range of factors behind why people self-injure, from the influence of social media to the need for self-regulation, and offers recommendations for both assessment and outpatient treatment. Throughout, the book is permeated by profound respect for those who use self-injury in an attempt to live a good life, while conveying a deep understanding of the challenges that self-injury presents for family members and treatment professionals. It recognizes that the behaviour can spread in hospital wards or other institutional settings, introducing the concept of self-injury by proxy, and assesses the range of therapies available, including CBT, MBT, ERGT and family therapy. Each chapter is complemented by clinical vignettes. In an era when a great number of professionals will come into contact with someone who self-injures - including teachers, social workers and nurses as well as therapists - The Assessment and Treatment of Non-Suicidal Self-Injury is an invaluable resource that examines both the causes and the treatments available.

Learn everything you need to know about the Ferguson MF 35 and T035! Featuring step-by-step instructions for weekly checks, operator maintenance, engines, cooling and fuel systems, transmissions, brakes, hydraulics, and so much more, this user-friendly restoration service manual goes back to the basics, detailing a wide range of topics so you can understand your tractor machinery from the inside out! Also included are more than 650 photographs, helpful charts for service schedules, torques, data specs, tool lists, and troubleshooting, and even a buying guide! Author Chris Jaworski is a technical writer, Tractor & Machinery magazine and a restoration enthusiast. For owners involved in servicing, repairs, or restoration of the Massey Ferguson MF 35 or T035, this crystal-clear guide will help you enjoy getting the work done quickly, efficiently, and correctly!

A vital guide to the frontlines of our fight against climate change and the scientific and technological innovations that will revolutionize the world. The United States' accelerated plans to combat the existential threat of climate change finally give reason to hope. In Our Livable World, research specialist and author Marc Schaus explores the incredible new green innovations in science and engineering that can allow us to avoid the worst repercussions of global warming as we work to usher in a sustainable, livable world. To beat a challenge the size of climate change, our solutions will have to be ambitious: solar thermal cells capable of storing energy long after the sun goes down, "smart highways" designed to charge your vehicle as you drive, indoor vertical farms automated to maximize crop growth with no pesticides, bioluminescent vines ready to one day replace our streetlights, jet fuel created from landfill trash-and next-generation carbon capture techniques to remove the emissions we have already released over the past several decades. Far from the geoengineering schemes of cliff action thrillers, real solutions are being developed, right this moment. Our Livable World features interviews with the innovators, real talk on the revolutionary technology, and a clear picture of a cleaner planet in the future. "An important book that shows the dawn of a new kind of environmental movement:an age where we invest in deeply creative and fascinating technical solutions that work in harmony with the Earth. Marc Schaus lays out the exciting future of environmental innovation before us." -Katie Patrick, author of How to Save the World

You don't need to be a trained soldier to fully appreciate this edition of the U.S. Army Improvised Munitions Handbook (TM 31-210). Originally created for soldiers in guerilla warfare situations, this handbook demonstrates the techniques for constructing weapons that are highly effective in the most harrowing of circumstances. Straightforward and incredibly user-friendly, it provides insightful information and step-by-step instructions on how to assemble weapons and explosives from common and readily available materials. Over 600 illustrations complement elaborate explanations of how to improvise any number of munitions from easily accessible resources. Whether you're a highly trained soldier or simply a civilian looking to be prepared, the U.S. Army Improvised Munitions Handbook is an invaluable addition to your library.

"Until now, most environmental discourse in architecture has focused on carbon as a by-product of building and construction," writes guest editor Elisa Iturbe in Log 47, "making it seem that at the ecological brink, architecture's most pressing concern is energy efficiency." "Overcoming Carbon Form," Log's 200-page thematic Fall issue, reconceives architecture's role in climate change, away from sustainability and solutionism and toward architecture's formal complicity and potential agency in addressing the climate crisis. As Iturbe writes, "Decarbonization is not solely a question of technology and buildings systems but also a theoretical question for architecture and the city, one that questions carbon modernity as an obsolete cultural and material foundation for architecture." To that end, the 24 authors - architects, artists, sociologists, historians, novelists, and policy makers - approach architecture's role in the climate crisis in widely varied ways. From Pier Vittorio Aureli and Maria Shéhérazade Giudici on rethinking private property to Michael Bell and Eunjeong Seong on the house as power plant; from Holly Jean Buck on carbon sequestration infrastructure to Mimi Sheller on the military-infrastructure complex; from Skender Luarasi on anticipation to Albert Pope on urban obsolescence; from Lizzie Yarina on neoliberal resilience schemes and Gökçe Günel on a status quo utopia to Tahl Kaminer on the impossibility of autarky and Douglas Spencer on the fantasy of island life. Also in this issue, Kiel Moe on new perspectives, Rania Ghosn on geographic externalities, Laurence Lumley on asphalt, Ingrid Halland on plastic, Greg Lindquist on rolling coal, and Daniel A. Barber on air-conditioning. Plus an excerpt from Amitav Ghosh's book The Great Derangement and a conversation with Rhianna Gunn-Wright on the Green New Deal.

This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact, and remains as true to the original work as possible. Therefore, you will see the original copyright references, library stamps (as most of these works have been housed in our most important libraries around the world), and other notations in the work. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work.
