of space to a value below the de Broglie wavelength of a charge carrier leads to complete quantization of the energy levels, density of states, etc. Such "quantum dots" are more similar to giant atoms in a dielectric cage than to classical solids or semiconductors showing a dispersion of energy as a function of wavevector. Their electronic and optical properties depend strongly on their size and shape, i.e. on their geometry. By designing the geometry by controlling the growth of QDs, absolutely novel possibilities for material design leading to novel devices are opened. This multiauthor book written by

world-wide recognized leaders of their particular fields and edited by the recipient of the Max-Born Award and Medal 2006 Professor Dieter Bimberg reports on the state of the art of the growing of quantum dots, the theory of self-organised growth, the theory of electronic and excitonic states, optical properties and transport in a variety of materials. It covers the subject from the early work beginning of the 1990s up to 2006. The topics addressed in the book are the focus of research in all leading semiconductor and optoelectronic device laboratories of the world.

1946 New York, Ellen, a world-renowned musician, is suffering from the effects of her latest mental breakdown. Amongst other challenges, a chance meeting with a folk singer from her past causes her psychological well-being to rapidly deteriorate. Over the following terrifying weeks, Ellen finds herself becoming both a criminal and a victim as she attempts to contend with the darkness within. "We have all had these feelings, more or less, and now and then. The healthier among us try to step back from the brink, try to laugh at what might have happened if we had gone a bit further. The reader of these
