x = 3.00 mol of H<sub>2</sub> was consumed. Notice that the above solution used the answer from example #5. The solution below uses the information given in the original problem: Solution #2: The H<sub>2</sub> / H<sub>2</sub>O ratio of 2/2 could have been used also. In that case, the ratio from the problem would have been 3.00 over x, since you were now using the water data and not the oxygen data.
