TRAC: Trends in Analytical Chemistry, Volume 9 provides information pertinent to the trends in the field of analytical chemistry. This book discusses a variety of topics related to analytical chemistry, including flow chemography, condensation polymers, sedimentary organic matter, nucleosides, and fuzzy expert systems. Organized into 43 parts encompassing 87 chapters, this volume begins with an overview of particle induced X-ray emission and its analytical applications. This text then discusses direct memory access data acquisition, which is an efficient method of

collecting data from analytical instrumentation. Other chapters consider the application of flow injection analysis in industrial research laboratory. This book discusses as well the utilization of the time-of-flight mass spectroscopy method. The final chapter deals with brassinosteroids, a group of steroidal plant growth substances that possess B-ring lactone and two vicinal diols. This book is a valuable resource for analytical chemists, biochemists, molecular biologists, physicists, engineers, scientists, and researcher workers.

Ultrasonics International 87 contains the Proceedings of the Ultrasonics International Conference and Exhibition held at London, United Kingdom on July 1987. The conference discussed and reviewed some of the developments in the field of ultrasonics. The compendium consists of over 150 contributed papers, four invited papers and three plenary papers. Topics discussed include generation

of unipolar ultrasonic pulses by signal processing; scattering of longitudinal waves by partially closed slots; piezoelectric materials for ultrasonic transducers; and measuring turbulent flow characteristics using a multi-dimensional ultrasonic probe. Fiber optic sensors, medical imaging and inverse methods, and laser generation of ultrasound are covered as well. Physicians, technicians, researchers, and physical scientists will find the book insightful.

summary of the utility and merit of each test.

Biological variables that may affect test results are discussed, and a focus is placed on reference ranges, diagnostic information, clinical interpretation of laboratory data, interferences, and specimen types. New and updated content has been added in all areas, with over 100 new tests added. Tests are divided into 8 main sections and arranged alphabetically. Each test includes necessary information such as test name (or disorder) and method, specimens and special requirements, reference ranges, chemical

interferences and in vivo effects, kinetic values, diagnostic information, factors influencing drug disposition, and clinical comments and remarks. The most current and relevant tests are included; outdated tests have been eliminated. Test index (with extensive cross references) and disease index provide the reader with an easy way to find necessary information. Four new sections in key areas (Preanalytical, Flow Cytometry, Pharmacogenomics, and Allergy) make this edition current and useful. New editor Alan Wu, who specializes in Clinical Chemistry and Toxicology,

brings a wealth of experience and expertise to this edition. The Molecular Diagnostics section has been greatly expanded due to the increased prevalence of new molecular techniques being used in laboratories.

References are now found after each test, rather than at the end of each section, for easier access.
