Reveal the vast, unseen relationship between matter and energy that's all around us with Just the Facts: Physical Science! Students discover the states of matter, the laws that govern the physical world, and much more through challenging, yet fun activities. This book contains over 100 cross-curricular lessons, word searches, data analysis, crossword puzzles, and more. Supports NSE standards.

This is an introductory book that provides students with the tools to master the basic principles of physics and chemistry needed by the aspiring technology professional. Like all the books in the critically acclaimed Preserving the Legacy series, each chapter is divided into subsections featuring learning objectives and a "Check Your Understanding" section to help students focus on important concepts. Questions requiring written and mathematical answers at the end of each chapter provide students with the opportunity to further demonstrate their understanding of the concepts. The only book available that specifically addresses the emerging need for a course to teach physics and chemistry principles to the growing number of students entering the various fields of technology, it offers a thorough grounding in foundational concepts along with "Technology" boxes that offer practical applications. Physical Science: What the Technology Professional Needs to Know features: * Crucial topics such as measuring systems, matter, energy, motion, electricity and magnetism, electromagnetic radiation, nuclear radiation and reactions, and chemical reactions and solutions * Integrated coverage linking specific concepts to everyday applications * An extensive glossary offering quick access to essential terminology * An accompanying laboratory manual with additional exercises to enhance learning With its comprehensive coverage and quick-reference format, Physical Science: What the Technology Professional Needs to Know is also a handy resource for any technology professional needing a quick refresher or useful working reference.

This book presents the physical science experiments in a space microgravity environment conducted on board the SJ-10 recoverable satellite, which was launched on April 6th, 2016 and recovered on April 18th, 2016. The experiments described were selected from ~100 proposals from various institutions in China and around the world, and have never previously been conducted in the respective fields. They involve fluid physics and materials science, and primarily investigate the kinetic properties of matter in a space microgravity environment. The book provides a comprehensive review of these experiments, as well as the mission's execution, data collection, and scientific outcomes.

This is a must-have book if you're going to tackle the challenging concepts of force and motion in your classroom. --

The Council of Scientific and Industrial Research (CSIR) is India's premier organization for Scientific Exploration and Advancement. Funded by the Ministry of Science and Technology, Government of India, this autonomous body conducts research in the fields of Aerospace Engineering, Ocean Sciences, Metallurgy, Leather, Environment Science, etc. A career with CSIR has the potential to make an everlasting impact in the realm of Science and Technology. You will have a golden opportunity to work with some of the best Scientists and Engineers in India. The Council has entrusted the responsibility of conducting CSIR UGC NET in a Computer-based format to the National Testing Agency (NTA)

It is often said that there is no "philosophy of science", but only the philosophies of certain scientists. But in so far as we recognize an authoritative body of opinion which decides what is and what is not accepted as present-day physics, there is an ascertainable present-day philosophy of physical science. It is the philosophy to which those who follow the accepted practice of science stand committed by their practice. This book contains the substance of the course of lectures which the author Eddington delivered as Turner Lecturer of Trinity College Cambridge in the Easter Term 1938. The lectures have afforded him an opportunity of developing more fully than in his earlier books the principles of philosophic thought associated with the modern advances of physical science.
