The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several years.
Nicelywed decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-
duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles.
Nicelywed configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and
alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others?
The National Research Council report is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy
estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and

Do you have trouble managing your emotions? First developed by Marsha M. Linehan for treating borderline personality disorder, dialectical behavior therapy (DBT) has proven effective as treatment for a range of other mental health conditions. This approach emphasizes the importance of managing emotions and behaviors in a way that is consistent with personal values and goals. By learning new skills and strategies, individuals can improve their overall quality of life and reduce the impact of their mental health challenges.
