Control in generative grammar: A research companion

Generative grammar is a linguistic theory that regards linguistics as the study of a hypothesized innate grammatical structure. A sociobiological modification of structuralist theories, especially glossematics, generative grammar considers grammar as a system of rules that generates exactly those combinations of words that form grammatical sentences in a given language.

Definition of Generative Grammar: Grammar refers to the set of rules that structure a language, including syntax (the arrangement of words to form phrases and sentences) and morphology (the study of words and how they are formed). Generative grammar is a theory of grammar that holds that human language is shaped by a set of basic principles that are part of the human brain (and even present ...

Definition and Examples of Generative Grammar

Generative grammar, a precisely formulated set of rules whose output is all (and only) the sentences of a language—i.e., of the language that it generates. There are many different kinds of generative grammar, including transformational grammar as developed by Noam Chomsky from the mid-1950s. Linguists have disagreed as to which, if any, of these different kinds of generative grammar serves ...
