Deploying and Managing a Cloud Infrastructure: Real World Skills for the CompTIA Cloud Certification and Beyond Exam CV0-001

Types of Cloud Deployment Models & Cloud Computing Models -

This type of deployment model of cloud computing is self-service and on-demand. The customers have full control over the cloud environment and can scale and deploy resources as needed. This deployment model is suitable for businesses that require high levels of flexibility and control over their cloud infrastructure.

Hybrid Cloud Deployment Model -

The hybrid cloud deployment model combines the benefits of both public and private clouds. It allows businesses to have a mix of on-premises and cloud-based resources, providing flexibility and cost savings. This deployment model is ideal for businesses that require a combination of control and scale.

Cloud Deployment Manager -

Deploying and Managing Instances -

Deploying Instances without Lifecycle Management -

Exclude Lifecycle Management feature can be enabled on virtual machines, VMs, and containers. This means that the Cloud Application Manager agent will not be installed. This can be useful in scenarios where you want to manage resources without the agent.

Managing the Complete Lifecycle of Stateless and Stateful Applications -

Challenges in Deploying and Managing Applications in Hybrid Cloud Environments -

Organizations are becoming more aggressive in deploying applications in hybrid cloud environments. The challenges include managing different cloud providers and ensuring compliance and security across multiple environments.
