Morse Test On Petrol Engine

the morse test can be used to measure the indicated power and mechanical efficiency of multi cylinder engines . The engines test is carried out as follows . The engine is run at maximum load at certain speed . The B.P is then measured when all cylinders are working . Then one cylinder is made in operative by cutting off the ignition to that cylinder .

MORSE TEST # AIM: To study and conduct Morse Test on three-cylinder four-stroke Petrol Engine and to determine: i) Indicated Power of Individual Cylinders ii) Indicated Power of Engine iii) Frictional Power of Engine iv) Mechanical Efficiency # THEORY: Morse Test is applicable to multi-cylinder engines. The engine is run at desired speed and output is noted.

MORSE TEST(LAB WORK OUT) - India Study Channel

Morse Test: Used for multi cylinder engines. Procedure: The engine is run at the required speed and the torque is measured. One cylinder is cut out by shorting the plug if an S.I. engine is under test. The speed falls because of the loss of power with one cylinder cut out but is restored by reducing the load.

Explain the procedure of Morse Test to be conducted for ...

Morse test is a method of obtaining approximate indicated power (I.P) of a multi-cylinder engine. This method is used for both S.I (petrol) and C.I (diesel) engine. In this method each cylinder is made inoperative one by one. Cylinder is made inoperative - In diesel- by cutting off the supply of fuel to each cylinder.

Morse Test Morse test is a method to measure the frictional power of a multicylinder SI engine. Morse Test - This test carried out on multi cylinder I.C. engine. In this test, first engine is allowed to run at constant speed and brake power of engine is measured when all cylinders are working and developing indicated power.

Morse Test The Morse test is applicable only to multi cylinder engines. In this test, the engine is first run at the required speed and the output is measured. Then, one cylinder is cut out by short circuiting the spark plug or by disconnecting the injector as the case may be. In this test, the engine is first run at the required speed and the ...

Measurement and testing of ic engine - SlideShare

Morse test can be conducted for Multi cylinder engines The purpose of Morse test is to obtain the approximate indicated power of a Multi cylinder engine. It consist of running the engine against the dynamo-meter at a particular speed, cutting out the firing of each cylinder in turn and noting the fall in BP each time while maintaining the speed constant.
