### Plants From Test Tubes An

Thirty years ago, in vitro propagation was a new technique for producing plants, and Lydiane Kyte's Plants from Test Tubes became the standard work on the topic. The new fourth edition has been thoroughly revised and updated to reflect the many advances in science and technology, including the five accepted sequential stages of micropropagation.

### Plants from Test Tubes: An Introduction to ...

A piece of a plant, which can be anything from a piece of stem, root, leaf, or bud to a single cell, is placed in that tiniest of greenhouses, a test tube. In an environment free from microorganisms and in the presence of a balanced diet of chemicals, that bit of plant, called an explant, can produce plantlets that, in turn, will multiply indefinitely, if given proper care.

Plants from Test Tubes remains the most accessible and practical book on the subject. The book is divided into two sections. The first, "The Basics of Tissue Culture", begins with a discussion of...

### Plants from Test Tubes: An Introduction to ...

If the season is right, you can transfer the plants to a sunny, outdoor garden after two to three weeks. Prepare the ground first and then gently pry the soil and plant out of the tube with a kitchen knife. Place the entire contents of the tube into the hole you dug. Gently pack the ground around your plant and water it.

The whole fill and plant process looks something like this: To really give the seeds their best chance, set up your plant light so it points right at the test tubes, and expose your tubes to light for several hours a day. Since the tube openings are so small, an eye dropper or spray bottle are a good idea for watering.

Begin this experiment by soaking three beans in two inches of water overnight. The next day, remove the beans from the water and fill three test tubes halfway with potting soil. Insert the beans in the test tubes and fill the remaining space in each with more potting soil. Place the test tubes in a warm, sunny area and water them daily.
